Education

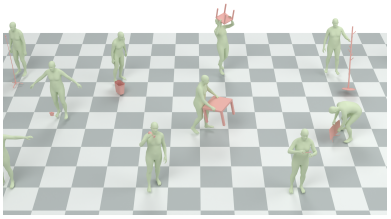

University of Science and Technology of China (USTC) *Hefei, China*
M.S. student, School of Artificial Intelligence and Data Science *Sep 2026 - Present*
Supervised by Prof. Jiangtao Wang and Assoc. Prof. Di Yang

Beijing Jiaotong University (BJTU) *Beijing, China*
Bachelor's degree, School of Electronic and Information Engineering *Sep 2022 - Jun 2026*

Research Interests

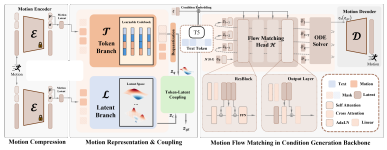

Motion generation; human-object interaction; multimodal generative models.

Selected Publications

View TRACE demo

[1] Harnessing Coupled Stream Completion for Human-Object Interaction Modeling *arXiv, 2026*
Dawei Guan, Di Yang, and Jiangtao Wang
Paper | Project and demo
TRACE represents body, object, and hand motion in separate latent streams while predicting updates from the complete interaction state. Geometry-aware losses constrain contact, relative pose, and timing after decoding. The framework supports completion of any missing stream and language-model-based interaction understanding.

View project demo

[2] FlowCoMotion: Text-to-Motion Generation via Token-Latent Flow Modeling *arXiv, 2026*
Dawei Guan, Di Yang, Chengjie Jin, and Jiangtao Wang
Paper | Project and demo
FlowCoMotion combines discrete motion tokens with continuous latents to retain semantic structure and fine motion detail. Multi-view distillation regularizes the continuous space, while temporal quantization extracts semantic cues. A text-conditioned velocity field is integrated with an ODE solver to generate motion.

Skills

Programming	Python
Frameworks	PyTorch, torchvision, Diffusers, Gradio
Computer vision	OpenCV, LPIPS, Transformers
